Teaching Statement

Great teachers always inspire student as well as others with their knowledge and values. Sharing knowledge as a mentor has been the foundation of progress and continuity all education systems around the world. Through the course of my own educational journey through school, college and university, in different part of the world, I have been inspired by teacher and professors whose teaching methods were intuitive, interesting, and broad. Inspired by them, I strived to be as effective either as a lab assistant, guest lecture or a mentor during my Ph.D. and Postdoc. The experience not only helped me improve my teaching methods, but it also helped me synthesis my own knowledge.

Teaching Experience

Courses

- Spatial multi-criteria analysis for environmental decision making. University of Trento, Italy, 2012-2014.
- Climate change vulnerability. ATREE, India, April-2014.

Invited Lectures

- Urban Risk Assessment, UNU-IHE, BONN, Germany, Sep-2018.
- Planning Policy. Amity University, India, Feb-2019.

Teaching Interests

I would like to teach courses like spatial multi-criteria analysis for environmental decision making, urban planning, land use planning and democracy, climate change, and application of geographic information science and earth observation in spatial planning. Based on my academic and professional background I would like to design multi-disciplinary courses for professionals and college student in the field of sustainability, urban issues, and governance in global south special focus on India.

I believe my passion for research and sharing knowledge, teaching experience and academic background make me fit for this position.
